GUNNEDAH COLLIERY ANNUAL REHABILITATION REPORT

Wednesday 1 January 2025 to Wednesday 31 December 2025

Summary table

Detail	
Mine	Gunnedah Colliery
Reference	ARR0001650
Annual report period commencement date	Wednesday 1 January 2025
Annual report period end date	Wednesday 31 December 2025
Forward program	FWP0001558
Mining leases	CCL 701 (1973), ML 1680 (1992)
Lease holder(s)	Namoi Mining PTY. LTD.
Contact	Daryl Robinson
Date of submission	Friday 27 February 2026
Document URL <small>Security reminder: Please exercise caution before opening external links. If a link appears suspicious, avoid clicking it and report it to the Resources Regulator.</small>	https://whitehavencoal.com.au/our-business/

Important

The department may make the information in your program and any supporting information available for inspection by members of the public, including by publication on its website or by displaying the information at any of its offices. If you consider any part of your program to be confidential, please communicate this to the department via the message function on this submission within the Resources Regulator Portal.

Mine Details

Project description

CCL701 encompasses the Black Jack Colliery and operations at Melville Open Cut, Springfield, Brickworks, No5, No4 and No2 entries and Underground workings, the Gunnedah Colliery Coal Processing Plant (CPP), a disused tramway and old coal loader, previous exploration areas, and portions of Black Jack Mountain. These sites are located between 5 and 10 kilometres to the southwest of Gunnedah town centre within the New England north-west Region of New South Wales (NSW). Whitehaven has divided the historical mining areas within CCL701 into discrete Closure Management Areas (CMAs). The CMAs adopted for the purpose of this RMP are as follows: CMA 1: Black Jack / Melville Underground. CMA 2: No. 2, No.4 and No.5 Underground. CMA 3: Melville Open Cut. CMA 4: Coal Preparation Plant (CPP). CMA 5: Tramway and Old Coal Loader. CMA 6: Other Lands. CMA 7: Road Corridors. CMA 8: Springfield Rehabilitation Plan Area. CMA 9: Brickworks Opencut Area*. CMA 10: Melville Opencut Area*

Life of mine

0 years

Current development consents, leases and licences

Development consents granted under the *Environmental Planning and Assessment Act 1979*

CCL701
CCL701
CCL701

Authorisations covering the mining area granted under the *Mining Act 1992*

CCL 701 (1973), ML 1680 (1992)

Any other approvals, licences, or authorities issued by government agencies that are relevant to the progress of mining operation and rehabilitation activities

Summary of the scope and/or purpose of the new applications or modifications to existing approvals (if applicable)

N/A

Changes to land ownership and land use

N/A

Surface disturbance and rehabilitation activities during the reporting period

Surface disturbance and rehabilitation activities that were conducted and an analysis of the progress against the rehabilitation schedule

Works undertaken at CCL701 consisted of rehabilitation maintenance and monitoring which includes seeding, monthly inspections, and ecological monitoring. Earthworks activity was limited to landforming of CMA Melville void area.

Rehabilitation planning activities that were conducted, including any specialist studies

Rehabilitation planning involved detailed scheduling of the rehabilitation works including a weekly planning meeting.

Overview of subsidence repair and/or remediation works undertaken

No subsidence repair was undertaken. Remediation of underground entries was undertaken with planning completed for the remainder of historic mine access entries.

Overview of rehabilitation management and maintenance activities

Appropriately qualified and experienced weed contractors were engaged to undertake weed control works across CCL701, including spot spray, boom spray and slashing. Rehabilitation undertaken during the 2025 reporting period included harrowing and seeding of newly landformed areas, and infill planting at CMA8, Springfield, consisting of barb wire grass along the top of the sloped area. Other ancillary tasks included general maintenance such as removal of general waste from site. Feral animal management was undertaken on a campaign basis. Campaigns target primarily Feral Pigs and Feral Fox. Landforming of Melville void was completed by qualified operators and monitored to ensure a safe and stable landform was created.

Details of any rehabilitation actions taken as required by any letters, notices or directions issued by government agencies, including the

Resources Regulator

No rehabilitation actions were undertaken as a result of any notices or directions.

Details of any rehabilitation areas that have achieved the final land use

No areas have achieved the final land use.

Key production milestones

MATERIAL	UNIT	FWP0001558 YEAR1	THIS REPORT
Stripped topsoil (if applicable)	(m ³)	0	0
Rock/overburden	(m ³)	230,000	0
Ore	(Mt)	0	0
Reject material¹	(Mt)	0	0
Product	(Mt)	0	0

¹This includes coarse rejects, tailings and any other wastes resulting from beneficiation.

Disturbance and rehabilitation statistics

Current disturbance and rehabilitation progression

ELEMENT		UNIT	THIS REPORT
A1	Total disturbance footprint - surface disturbance	(ha)	5.91
B	Total active disturbance	(ha)	-449.77
C	Rehabilitation - land preparation	(ha)	43.22
D	Ecosystem and land use establishment	(ha)	76.71
E	Ecosystem and land use development	(ha)	335.75
F	Rehabilitation completion	(ha)	0

Rehabilitation key performance indicators (KPIs)

ELEMENT		UNIT	THIS REPORT
G	New disturbance area	(ha)	-394.29
H	New rehabilitation commenced during annual reporting period	(ha)	-77.83
I	Established rehabilitation	(ha)	335.75
J	Annual rehabilitation to disturbance ratio	%	0.2
K	Rehabilitated land to total mine footprint	%	5,679.39

Progressive achievement of established rehabilitation

	ELEMENT	UNIT	THIS REPORT
L	Established rehabilitation for agricultural final land uses	%	82.25
M	Established rehabilitation for native ecosystem final land uses	%	7.41
N	Established rehabilitation for other/non-vegetated final land uses	%	3.02

Variation to the rehabilitation schedule

Identify the components of the most recent forward program that were not achieved

N/A

Key factors that delayed progressive rehabilitation

N/A

Outline actions that will be included in the forward program and carried out to minimise disturbance and undertake progressive rehabilitation as far as reasonably practical

In the FWP 2026-28 all rehabilitation will be completed in the FWP term.

Rehabilitation monitoring and research findings

Rehabilitation monitoring

The rehabilitation monitoring carried out in the annual reporting period

A detailed annual ecological assessment of rehabilitated areas and analogue sites was completed in 2025. Monitoring was undertaken using the Whitehaven Annual Rehabilitation Monitoring Methodology (WARMM). Completion criteria targets are limited to mean targets derived from analogue site values or specific values provided in the RMP. Analogue benchmark values have been derived using all available analogue site data from current and prior monitoring years. Springfield - Monitoring in the Woodland Domain comprised: two repeat monitoring woodland rehabilitation sites; one repeat monitoring analogue woodland site; and Six categorical rehabilitation point assessments at notable locations within the Woodland rehabilitation. Brickworks- Monitoring in the Pasture Domain comprised: seven repeat monitoring pasture rehabilitation sites; two repeat monitoring analogue pasture sites; and one categorical rehabilitation point assessment at a notable location within the Pasture rehabilitation CCL701 CPP - Monitoring in the Pasture Domain comprised: four newly established pasture sites; two repeat monitoring analogue pasture sites; and Four categorical rehabilitation point assessments at notable locations within the Pasture rehabilitation. Melville - Monitoring in the Pasture Domain comprised: five repeat monitoring pasture rehabilitation sites; and two repeat monitoring analogue pasture sites. Alongside ecological monitoring, each site is monitored quarterly by qualified Agronomists. Agronomists inspect monitoring points quarterly to identify seasonal weed load variations in rehabilitation areas. Resulting reports include recommendations that inform the targeted weed control program. In addition to specialist monitoring, internal visual inspections are undertaken by staff on a monthly basis. This process includes monitoring images taken, identification of any weed presence, erosion monitoring, feral animal presence, growth and condition of all stages of planted vegetation, and noting of any other general rehabilitation maintenance needed. Sites are also inspected in response to weather events, e.g. post rainfall assessments, to ensure no damage has occurred to the site and in particular rehabilitation areas. These inspections ensure we are creating a safe and stable landscape as well as suitable conditions for rehabilitation success. Any maintenance flagged in our

internal inspections is rectified as part of the rehabilitation maintenance program. Detailed and repeat monitoring both internally and externally has ensured that the sites within Gunnedah Colliery have been monitored sufficiently and have been maintained in the most efficient and informed way possible.

Status of performance against rehabilitation objectives and rehabilitation completion criteria

The monitoring program that has been implemented

A detailed annual ecological assessment of rehabilitated areas and analogue sites was completed in 2025. Monitoring was undertaken using the Whitehaven Annual Rehabilitation Monitoring Methodology (WARMM). Completion criteria targets are limited to mean targets derived from analogue site values or specific values provided in the RMP. Analogue benchmark values have been derived using all available analogue site data from current and prior monitoring years. Springfield - Monitoring in the Woodland Domain comprised: two repeat monitoring woodland rehabilitation sites; one repeat monitoring analogue woodland site; and Six categorical rehabilitation point assessments at notable locations within the Woodland rehabilitation. Brickworks- Monitoring in the Pasture Domain comprised: seven repeat monitoring pasture rehabilitation sites; two repeat monitoring analogue pasture sites; and one categorical rehabilitation point assessment at a notable location within the Pasture rehabilitation CCL701 CPP - Monitoring in the Pasture Domain comprised: four newly established pasture sites; two repeat monitoring analogue pasture sites; and Four categorical rehabilitation point assessments at notable locations within the Pasture rehabilitation. Melville - Monitoring in the Pasture Domain comprised: five repeat monitoring pasture rehabilitation sites; and two repeat monitoring analogue pasture sites

Are all rehabilitation areas in Landform Establishment phase or higher represented in the monitoring program to assess performance against the rehabilitation objectives and approved or, if not yet approved rehabilitation completion criteria and final landform and rehabilitation plan?

Yes

Year rehabilitation areas will be included as part of the monitoring program

An appraisal of whether rehabilitation is moving towards achieving the proposed rehabilitation objectives, approved or, if not yet approved, rehabilitation completion criteria and final landform and rehabilitation plan as soon as reasonably practicable.

Based on the annual ecological monitoring, CCL701 is moving toward achieving completion criteria with some areas meeting target range. Areas that met completion criteria targets include pasture surface cover for Brickworks, which has a monitoring area that has continued to achieve target since the monitoring program began in 2020. Brickworks has moved into Development Phase as the data suggests that surface cover at this site will remain above the benchmark; monitoring and weed control will continue at this site to support its development. Woodland rehabilitation at Sunnyside is also achieving criteria targets in multiple areas showing promising progression, including surface cover that has met the benchmark since 2021, Pasture for this site has moved into Development and will continue to be monitored. Overall, the Gunnedah Colliery rehabilitation is progressing to meeting rehabilitation objectives and completion criteria at all sites as soon as reasonably practical.

Appraisal description

Rehabilitation is moving towards achieving the final land use as soon as reasonably practicable.

Rehabilitation monitoring program findings

Springfield – Woodland – achieved the benchmark goal for surface cover, shrub species richness, and shrub density. Exceeded the criteria for tree species richness. Yet to achieve the target for groundcover, grass cover, native species richness, tree density, and weed presence. Phase-specific targets are currently not applicable to mid-storey cover and over-storey cover. Brickworks – Pasture – achieved benchmark goal for surface cover and weed species richness. Yet to achieve target for weed cover. CCL701 CPP – Pasture – achieved benchmark for weed species richness and weed cover. Phase-specific targets are not currently applicable to surface cover. Melville – Pasture – achieved benchmark goal for surface cover and weed species richness. Yet to achieve target for weed cover.

Performance issues and their causes including identification of any knowledge gaps that must be addressed

Attachment 1 - Reporting Definitions

REPORTING CATEGORY		DEFINITION
A1	Total disturbance footprint - surface disturbance	<p>All areas within a mining lease that either have at some point in time or continue to pose a rehabilitation liability due to surface disturbance activities.</p> <p>The total disturbance footprint is the sum of the total active disturbance, decommissioning, landform establishment, growth medium development, ecosystem and land use establishment, ecosystem and land use development and rehabilitation completion (see definitions below).</p> <p>Underground mining operations should not include the footprint of underground mining areas/subsidence management areas in the total disturbance footprint.</p>
A2	Underground Mining Area	Underground mining operations areas/subsidence management areas.
B	Total active disturbance	Includes on-lease exploration areas, stripped areas ahead of mining, infrastructure areas, water management infrastructure, sewage treatment facilities, topsoil stockpile areas, access tracks and haul roads, active mining areas, waste rock emplacements (active/unshaped/in or out-of-pit), tailings dams (active/unshaped/uncapped) and temporary stabilised areas (e.g. areas sown with temporary cover crops for dust mitigation and temporary rehabilitation).
C	Rehabilitation - land preparation	Includes the sum of all disturbed land within a mining lease that have commenced any, or all, of

REPORTING CATEGORY		DEFINITION
		<p>the following phases of rehabilitation - decommissioning, landform establishment and growth medium development.</p> <p>Refer to the glossary of terms in this document for the definition of these phases of rehabilitation.</p>
D	Ecosystem and land use establishment	<p>Includes the area which has been seeded/planted with the target vegetation species for the intended final land use. However, vegetation has not matured to a stage where it can be demonstrated that it will be sustainable for the long term and or require only a maintenance regime consistent with target reference/analogue sites.</p> <p>Typically, rehabilitation areas would be in this phase for at least two years (and usually more) before rehabilitation can be classified as being in the ecosystem and land use development phase. This phase does not apply to infrastructure areas that are being retained as part of final land use for the site.</p>
E	Ecosystem and Land Use Development	<p>Rehabilitation has matured to a level where target revegetation outcomes are on a trajectory towards meeting the final rehabilitation objectives and rehabilitation completion criteria (as verified by monitoring).</p> <p>This phase includes infrastructure areas that are to be retained for an approved post mining land use, following completion of all necessary measures to render the infrastructure fit for this purpose (for example structural integrity).</p>

REPORTING CATEGORY		DEFINITION
F	Rehabilitation Completion	The Resources Regulator has determined in writing that the mining area has achieved the approved rehabilitation objectives and approved rehabilitation completion criteria and final landform and rehabilitation plan following the submission of Form: <i>Rehabilitation completion and/or review of rehabilitation cost estimate and/or notification of mine or petroleum site closure</i> .
G	New active disturbance area	The area of any new active disturbance that has been created during the annual reporting period (definition A1 in Table 5).
H	New rehabilitation commenced during annual reporting period	The sum of any new rehabilitation commenced in the annual reporting period. These areas may be in the rehabilitation land preparation phase or the ecosystem & land use establishment phase (definitions C and D in Table 5).
I	Established rehabilitation (hectares)	The total area of land that is verified to be within either the ecosystem and land use development phase or the rehabilitation completion phase (definitions E & F in Table 5).
J	Annual rehabilitation to disturbance ratio	The rehabilitation to disturbance ratio (H/G) indicates how many hectares of new rehabilitation are undertaken for each hectare of land disturbed during the year. A ratio of 1/1 indicates that the area of new rehabilitation and disturbance in that year are the same.
K	% Rehabilitated land to total mine footprint	The proportion of the total mine footprint (area of land that has been disturbed by past or present surface disturbance activities) that has established rehabilitation ($I/A1 \times 100$). For open cut mining, the proportion of the total mine footprint verified to be "established rehabilitation" should substantially increase as an operation progresses towards mine closure.

REPORTING CATEGORY		DEFINITION
L	Established rehabilitation for agricultural final land uses (hectares)	The percentage of total area of land that is verified to be within either the ecosystem and land use development phase or the rehabilitation completion phase (definitions E & F in Table 5) that have been returned to an agricultural final land use.
M	Established rehabilitation for native ecosystem final land uses (hectares)	The percentage of total area of land that is verified to be within either the ecosystem and land use development phase or rehabilitation completion phase (definitions E & F in Table 5) that have been returned to native ecosystem final land use.
N	Established rehabilitation for other/non-vegetated final land uses (hectares)	The percentage of total area of land that is verified to be within either the ecosystem and land use development phase or the rehabilitation completion phase (definitions E & F in Table 5) that have been returned to other/non-vegetated final land use.

Attachment 2 - Definitions

WORD	DEFINITION
Active	In the context of rehabilitation, land associated with mining domains is considered 'active' for the period following disturbance until the commencement of rehabilitation.
Active mining phase of rehabilitation	In the context of rehabilitation, the active mining phase of rehabilitation constitutes the rehabilitation activities undertaken during mining operations such as salvaging and managing soil resources, salvaging habitat resources, and native seed collection. This phase also includes management actions taken during operations to manage risks to rehabilitation and enhance rehabilitation outcomes such as selective handling of waste rock and management of tailings emplacements.
Analogue site	In the context of rehabilitation, an analogue site is a 'reference site' that represents an example of the defining characteristics (such as vegetation composition and structure or agricultural productivity) of the final land use. Characteristics of analogue sites can be assessed to develop the rehabilitation objectives and completion criteria for final land use domains.
Annual rehabilitation report and forward program	As described in the Mining Regulation 2016.
Annual reporting period	As defined in the Mining Regulation 2016.
Closure	A whole-of-mine-life process, which typically culminates in the relinquishment of the mining lease. It includes decommissioning and rehabilitation to achieve the approved final land use(s).

WORD	DEFINITION
Decommissioning	The process of removing mining infrastructure and removing contaminants and hazardous materials.
Decommissioning Phase of Rehabilitation	Activities associated with the removal of mining infrastructure and removal and/or remediation of contaminants and hazardous materials. In the context of the rehabilitation management plan this phase of rehabilitation may also include studies and assessments associated with decommissioning and demolition of infrastructure or works carried out to make safe or 'fit for purpose' built infrastructure to be retained for future use(s) following lease relinquishment.
Department	Department of Primary Industries and Regional Development.
Disturbance	See Surface Disturbance.
Disturbance area	<p>An area that has been disturbed and that requires rehabilitation.</p> <p>This may include areas such as on-licence exploration areas, stripped areas ahead of mining, infrastructure areas, water management infrastructure, sewage treatment facilities, topsoil stockpile areas, access tracks and haul roads, active mining areas, waste emplacements (active/unshaped/in or out-of-pit), tailings dams (active/unshaped/uncapped), and areas requiring rehabilitation that are temporarily stabilised (i.e. managed to minimise dust generation and/or erosion).</p>
Domain	An area (or areas) of the land that has been disturbed by mining and has a specific operational use (mining domain) or specific final land use (final land use domain). Land within a domain typically has similar geochemical and/or geophysical characteristics and therefore requires specific rehabilitation

WORD	DEFINITION
	activities to achieve the associated final land use.
Ecosystem and Land Use Development	<p>This phase of rehabilitation consists of the activities to manage maturing rehabilitation areas on a trajectory to achieving the approved rehabilitation objectives and completion criteria.</p> <p>For vegetated land uses this phase may include processes to develop characteristics of functional self-sustaining ecosystems, such as nutrient recycling, vegetation flowering and reproduction, and increasing habitat complexity, and development of a productive, self-sustaining soil profile.</p> <p>This phase of rehabilitation may include specific vegetation management strategies and maintenance such as tree thinning, supplementary plantings and weed management.</p>
Ecosystem and Land Use Establishment	<p>This phase of rehabilitation consists of the processes to establish the approved final land use following construction of the final landform.</p> <p>For vegetated land uses this rehabilitation phase includes establishing the desired vegetation community and implementing land management activities such as weed control. This phase of rehabilitation may also include habitat augmentation such as installation of nest boxes.</p>
Exploration	Has the same meaning as that term under the State Environmental Planning Policy (Mining, Petroleum Production and Extractive Industries) 2007.
Final landform and rehabilitation plan	As defined in the Mining Regulation 2016.

WORD	DEFINITION
Final land use	As defined in the Mining Regulation 2016.
Form and way	Means the form and way approved by the Secretary. Approved form and way documents are available on the department's website.
Growth Medium Development	<p>This phase of rehabilitation consists of activities required to establish the physical, chemical and biological components of the substrate required to establish the desired vegetation community (including short lived pioneer species).</p> <p>This phase may include spreading the prepared landform with topsoil and/or subsoil and/or soil substitutes, applying soil ameliorants to enhance the physical, chemical and biological characteristics of the growth media, and actions to minimise loss of growth media due to erosion.</p>
Habitat	Has the same meaning as that term under the Biodiversity Conservation Act 2016 and the Fisheries Management Act 1994 (as relevant).
Indicator	An attribute of the biophysical environment (e.g. pH, topsoil depth, biomass) that can be used to approximate the progression of a biophysical process. It can be measured and audited to demonstrate (and track) the progress of an aspect of rehabilitation towards a desired completion criterion (i.e. defined end point). It may be aligned to an established protocol and used to evaluate changes in a system.
Land	As defined in the Mining Act 1992.

WORD	DEFINITION
Landform Establishment	<p>This phase of rehabilitation consists of the processes and activities required to construct the final landform.</p> <p>In addition to profiling the surface of rehabilitation areas to the approved final landform profile this phase may include works to construct surface water drainage features, encapsulate problematic materials such as tailings, and prepare a substrate with the desired physical and chemical characteristics (e.g. rock raking or ameliorating sodic materials).</p>
Large mine	As defined in the Mining Regulation 2016.
Lease holder	The holder of a mining lease.
Life of mine	The timeframe of how long a mine is approved to mine, from commencement to closure.
Mine rehabilitation portal	<p>Means the Resources Regulator's online portal that lease holders must use (via a registered account) to:</p> <ul style="list-style-type: none"> ▪ upload rehabilitation geographical information system (GIS) spatial data ▪ develop rehabilitation GIS spatial data (using online tracing functions) ▪ generate rehabilitation plans and rehabilitation statistics using the map viewer and Rehabilitation Key Performance Indicator functionalities. <p>Data submitted to the mine rehabilitation portal is collated in a centralised geodatabase for use by</p>

WORD	DEFINITION
	the Resources Regulator to regulate rehabilitation performance of lease holders.
Mining area	As defined in the Mining Act 1992.
Mining domain	A land management unit with a discrete operational function (e.g. overburden emplacement), and therefore similar geophysical characteristics, that will require specific rehabilitation treatments to achieve the final land use(s).
Mining land	As defined in the Mining Act 1992.
Native vegetation	Has the same meaning as that term under section 60B of the Local Land Services Act 2013.
Overburden	Material overlying coal or a mineral deposit.
Performance indicator	An attribute of the biophysical environment (for example pH, slope, topsoil depth, biomass) that can be used to demonstrate achievement of a rehabilitation objective. It can be measured and audited to demonstrate (and track) the progress of an aspect of rehabilitation towards a desired completion criterion, that is, a defined end point. It may be aligned to an established protocol and used to evaluate changes in a system.
Phases of rehabilitation	The stages and sequences of actions required to rehabilitate disturbed land to achieve the final land use. The phases of rehabilitation are:

WORD	DEFINITION
	<ul style="list-style-type: none"> ▪ active mining ▪ decommissioning ▪ landform Establishment ▪ growth medium development ▪ landform Establishment ▪ ecosystem and land use establishment ▪ ecosystem and land use development
Progressive rehabilitation	The progress of rehabilitation towards achieving the approved rehabilitation completion criteria. This may be described in terms of domains, phases, performance indicators and rehabilitation completion criteria.
Rehabilitation Completion	The final phase of rehabilitation when a rehabilitation area has achieved the approved rehabilitation objectives and rehabilitation completion criteria for the final land use. Rehabilitation areas may be classified as complete when the Resources Regulator has determined in writing that the relevant rehabilitation obligations have been fulfilled following submission of <i>Form ESF2 Rehabilitation completion and/or review of rehabilitation cost estimate application</i> by the lease holder.
Rehabilitation Completion criteria	As defined in the Mining Regulation 2016.
Rehabilitation cost estimate	As defined in the Mining Regulation 2016.

WORD	DEFINITION
Rehabilitation management plan	As defined in the Mining Regulation 2016.
Rehabilitation objectives	As defined in the Mining Regulation 2016.
Rehabilitation risk assessment	As defined in the Mining Regulation 2016.
Rehabilitation schedule	The defined timeframes for progressive rehabilitation set out in the forward program.
Relevant stakeholders	<p>Means any persons or bodies who may be affected by the mining operations, including rehabilitation, carried out on the lease land, and includes:</p> <ul style="list-style-type: none"> ▪ the relevant development consent authority ▪ the local council ▪ the relevant landholder(s) ▪ community consultative committee (if required under the development consent) or equivalent consultative group ▪ affected land holder(s) ▪ government agencies relevant to the final land use ▪ affected infrastructure authorities (electricity, telecommunications, water, pipeline, road, rail authorities) ▪ local Aboriginal communities, and ▪ any other person or body determined by the Minister to be a relevant stakeholder in relation to

WORD	DEFINITION
	a mining lease.
Risk	The effect of uncertainty on objectives. It is measured in terms of consequences and likelihood (AS/NZS ISO 31000:2009).
Secretary	The Secretary of the department.
Security deposit	An amount that a mining lease holder is required to provide and maintain under a mining lease condition, to secure funding for the fulfilment of obligations under the lease (including obligations that may arise in the future).
Surface disturbance	Includes activities that disturb the surface of the mining area, including mining operations, ancillary mining activities and exploration.
Tailings	A combination of the fine-grained solid material remaining after the recoverable metals and minerals have been extracted from the mined ore, and any process water ² .
Waste	Has the same meaning as that term under the <i>Protection of the Environment Operations Act 1997</i> .

²Commonwealth of Australia (DITR), 2007. Tailings Management.
