

Narrabri Mine

North west exploration licences

The Narrabri Mine is an existing underground coal mine located 17km south east of Narrabri. It has been operating since 2012 and employs around 500 people, most of whom live in the region.

The Mine has had two exploration licences (EL), EL9455 and EL9466 approved under the NSW Government's Operational Allocation framework. The framework allows for existing tenement holders to apply for an area of up to 33% of their existing tenement size for the purposes of developing a better mine design, recovering coal resources that would otherwise be likely to be sterilised, or extending the life of a mine.

The approved licences cover a combined area of around 3721 hectares south of the town of Narrabri:

- EL9456: 1,746Ha located about 23 kilometres south of Narrabri
- EL9455: 1,975Ha located about 12 kilometres south of Narrabri.

The Department of Regional NSW has assessed the applications in accordance with relevant Government guidelines, including running a market interest test over a larger area called 'Gorman North' (AUTH216) which didn't receive any interest from any other parties.

Gorman North

The **Strategic Statement on Coal Exploration and Mining in NSW** identifies areas where potential future coal exploration could take place. The area to the north west of the existing Narrabri Mine known as Gorman North is included as an area for potential exploration.

Gorman North is covered by a government authority AUTH216, which overlaps with areas covered by the Narrabri Mine's exploration licence applications.

A market interest test was conducted by the NSW Government over this area. No interest was received from any other party in tendering for the area.

Exploration program

Whitehaven Coal is currently reviewing potential exploration programs for the licenced areas.

Prior to exploration activities taking place we must:

- Assess and design our planned exploration program
- Complete and have approved a Review of Environmental Factors (REF) to assess any potential impacts resulting from exploration activities
- Obtain access agreements with landholders where exploration is planned to take place.
